![ALERT LOGIC®]

ALERT LOGIC® ESSENTIALS

Vulnerability and asset visibility with extended endpoint protection

Your security and IT teams can benefit from greater visibility into deployed assets, misconfigurations and software vulnerabilities.

Alert Logic Essentials provides visibility across your environments (cloud, on-premises, or hybrid), and helps you identify the remediation steps required to eliminate exposures. You'll be able to automatically track additions, moves, or deletions across your environments. You can also identify exposures in network and service layers that could ultimately lead to a compromise.

Alert Logic Essentials also provides extended endpoint protection using machine learning and behavioral analytics to help you gain greater control over risk exposure on Windows and Mac clients.

ALERT LOGIC ESSENTIALS INCLUDES THE FOLLOWING:

- Asset discovery
- Vulnerability scanning
- Cloud configuration checks
- Extended endpoint protection
- Threat Risk Index
- Remediation guidance
- Prioritization and next steps
- Comprehensive vulnerability library
- 24/7 email and phone support
- PCI Scanning and ASV support
- Service health monitoring

WITH ALERT LOGIC ESSENTIALS, YOU GET:

ASSET VISIBILITY

Discover and visualize the assets in an environment based on our recurring discovery process. Health of your deployment is monitored and appropriate recommendations about how to improve your deployment are pro-actively provided.

VULNERABILITY VISIBILITY

Discover and visualize weaknesses in your deployed assets and cloud configuration through internal, external and PCI Scans.

Vulnerability status is projected onto an interactive asset topology. Get interactive reports to monitor, analyze, visualize and share your vulnerability posture and remediation progress.

EXTENDED ENDPOINT PROTECTION

Monitor and isolate endpoint attacks at the earliest opportunity. Thwart multiple attack techniques in real-time with deep visibility across endpoints, including low-level system activity, without impacting performance

THREAT RISK INDEX

Leverage Alert Logic's security intelligence to track your organization's exposure risk. The Alert Logic Threat Risk Index uses known vulnerability and age data, visibility to the internet and threat intelligence on active exploits to provide a risk index for your deployments and assets.

SUPPORT SERVICES AND PCI SCANNING ASV SUPPORT

GetPCI help with scan scheduling, PCI accredited scan results, and the remediation and exception processes to achieve and maintain PCI compliance.

En
ALERT LOGIC®
ENTERPRISE

***Professional* + Managed WAF & Assigned SOC Analyst options**

SECURITY PLATFORM

Essentials
- Asset discovery
- Vulnerability scanning
- Extended endpoint protection
- Cloud configuration checks
- Compliance

Professional
- Threat monitoring and visibility
- Intrusion detection
- Security analytics
- Log collection and monitoring
- Extensive log search capabilities
- Anti-virus and Cloud vendor security integrations

Enterprise
- Always-on WAF defense against web attacks (e.g. OWASP Top 10, emerging threats, zero-day vulnerabilities)
- Protection from SQL Injection, DoS attacks, URL tampering, cross-site scripting attacks & more

THREAT INTELLIGENCE

Essentials
- Threat Risk Index
- Remediation guidance
- Prioritization and next steps
- Comprehensive vulnerability library

Professional
- Event insights and analysis
- User behavior anomaly detection
- Threat frequency, severity, and status intelligence
- Attack protection capabilities

Enterprise
- Verified testing against more than 2.1 million web application attacks
- Advanced detection capabilities to spot and block malicious activity
- Dark Web scanning

EXPERT DEFENDERS

Essentials
- 24/7 email and phone support
- PCI Scanning and ASV support
- Service health monitoring

ACTIVEWATCH PROFESSIONAL
- 24/7 SOC with incident management, escalation, and response support

ACTIVEWATCH ENTERPRISE
- Security Posture Review
- Incident response assistance
- Threat hunting
- Help with tuning strategies, customized policies, and best practices
